

# CSE 8A Lecture 15

- Reading for next class: 10.1-10.4
- Today's (and Wednesday's) goals:
  - Recover from Exam #3 ( it was challenging! )
    - Review/Bring your graded midterm for 2/27 lecture (returned in lab 2/26)
    - 2<sup>nd</sup> chance to learn! Exam #4 (on 3/8) will be similar to Exam #3
  - Practice writing and typing in code from scratch
  - Practice tracing code
  - Applying the same algorithm to a picture and a sound
  - Modifying data “in place”
- PSA 8 (basics/loops/decisions) due Monday (3/4)
  - Individual (no partner)

# Exam 3

- Was hard, but many of you did great!!
- Stats:
  - Mean: 54% (Median 55%)
  - 20% of the class (62 students)  $\geq 80\%$  (16 points /20 points)
- If you scored 80% or above, NICE JOB! You are doing extremely well and should be very proud of your performance
- If you scored between 60 and 80, not bad. You're doing well. Keep working; you're on a good track.
- If you scored lower than a 60, it's time to PRACTICE
  - Write code (on paper)
  - Practice writing code and typing code by yourself
  - Come see instructors/TAs/Tutors for more help

# Become a super hero!

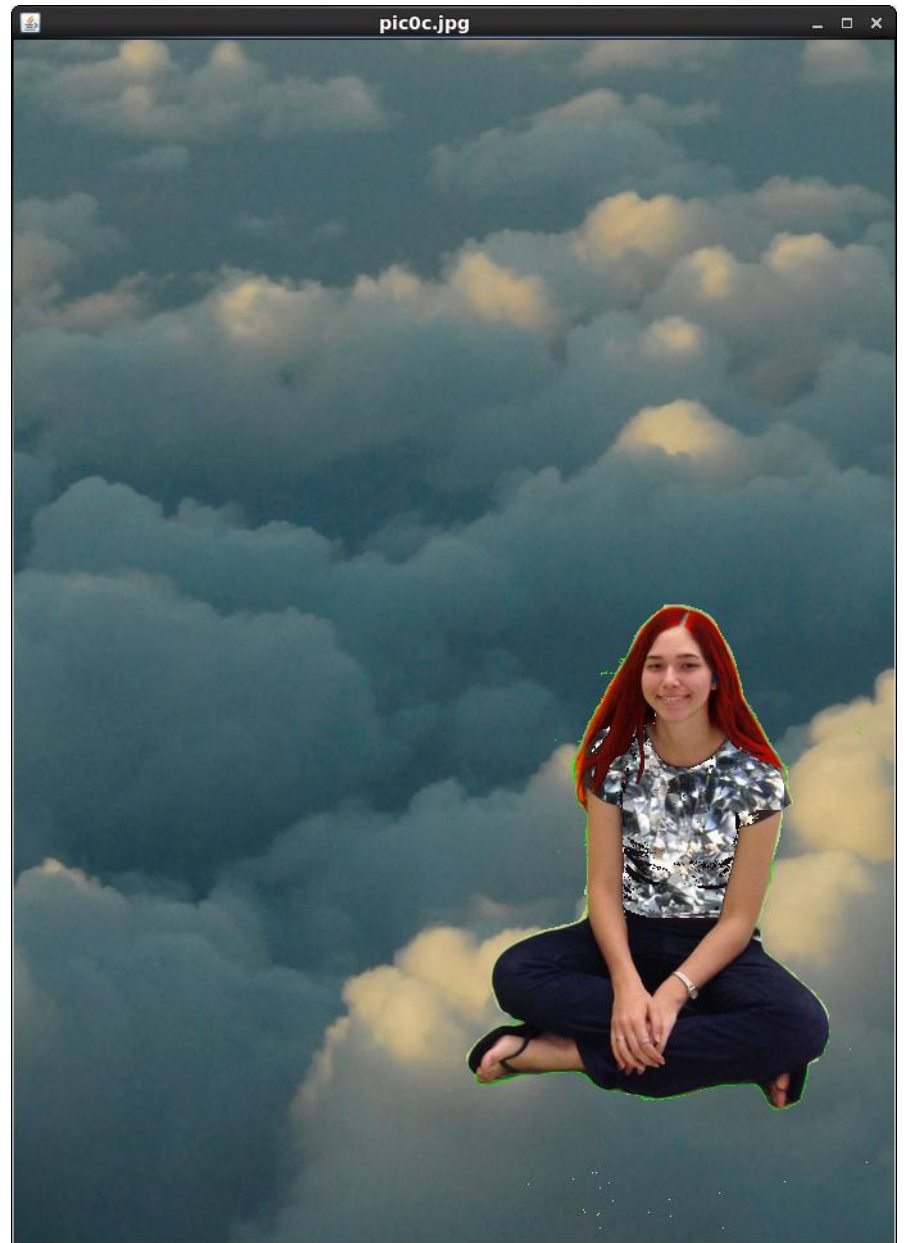

Sneha Jayaprakash and Sarah Haroon

Sandra Hui and Sandeep Gill

Sachi Pitkin and Tiffany Truong

Dylan Mozlowski and Luis Castillo

# Political commentary

Michael Chin + Chu Jang

# Pop Culture

Michelle Wu and Kirk Wong  
"It's a-me, Mario! And my brother, Luigi!" :D

Jason Tan and Zeyu Chen

# Options to raisePitch

- Create new Sound
  - V1) Of exact length needed for higher pitched sound
  - V2) Of same length as original with “silence” at end

# Complete the raisePitch method

```
public Sound raisePitch()  
{  
    int origI, newPlace = 0;  
    SoundSample [] original = this.getSamples();  
  
    Sound highP = new Sound( original.length / 2 );  
    SoundSample [] higher = highP.getSamples();  
  
    for( origI = 0; origI < original.length ; origI+=2 )  
    {  
        higher[newPlace].setValue( original[origI].getValue() );  
  
        newPlace++;  
    }  
  
    return highP;  
}
```

# Complete V2: Create new sound of same length with 0 at end

```
public Sound raiseP()
{
    int newPlace = 0;
    Sound highP  = new Sound(this);

    SoundSample[] original = this.getSamples();
    SoundSample[] higher   = highP.getSamples();

}
```

- 1) Solo: (60 sec)
- 2) Discuss/Group (2 min)

# How would the code below, change the SoundSample array?

```
public void mystery() // In the Sound class
{
    SoundSample [] original = this.getSamples();
    for ( int index = 0 ; index < original.length ; index++ )
    {
        original[index].setValue( original[index/2].getValue() );
    }
}
```

100	150	200	300	140	10	-40	-100	-250	-150
-----	-----	-----	-----	-----	----	-----	------	------	------

- A 

100	100	150	150	200	200	300	300	140	140
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----
- B 

100	100	100	100	100	100	100	100	100	100
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----
- C 

100	200	140	-40	-250	10	-40	-100	-250	-150
-----	-----	-----	-----	------	----	-----	------	------	------

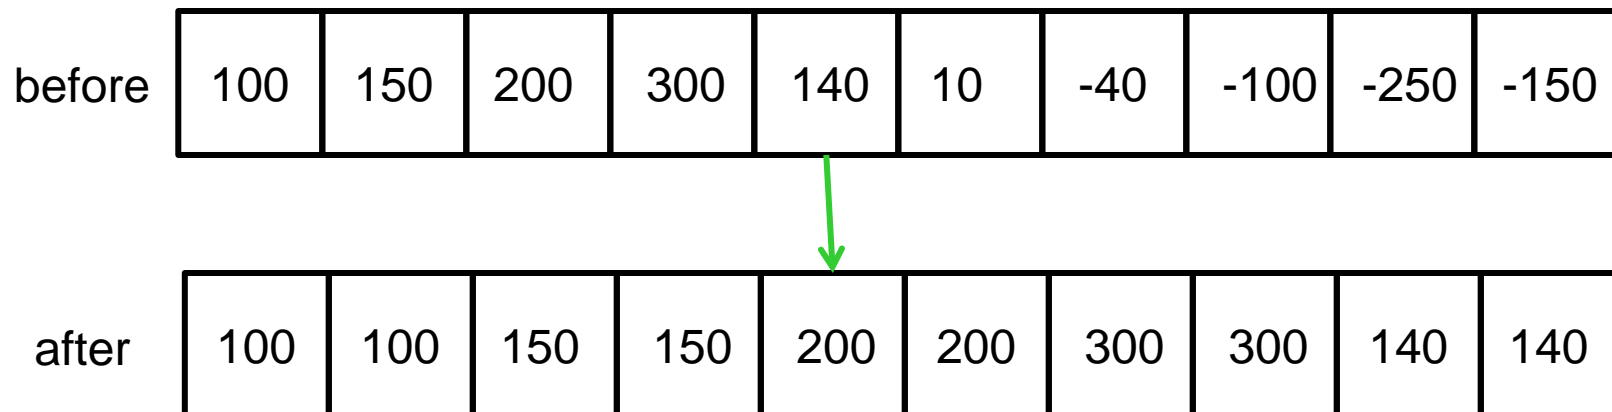

D  
It causes  
an error

# Lowering the Pitch of the Sound

```
public void lowerPitch()                                // In the sound class
{
    SoundSample[] original = this.getSamples();

    for ( int index = 0; index < original.length; index++ )
        original[index].setValue( original[index/2].getValue() );
}
```

Problem: We are overwriting the values we need to use before we have used them!  
Possible solutions?

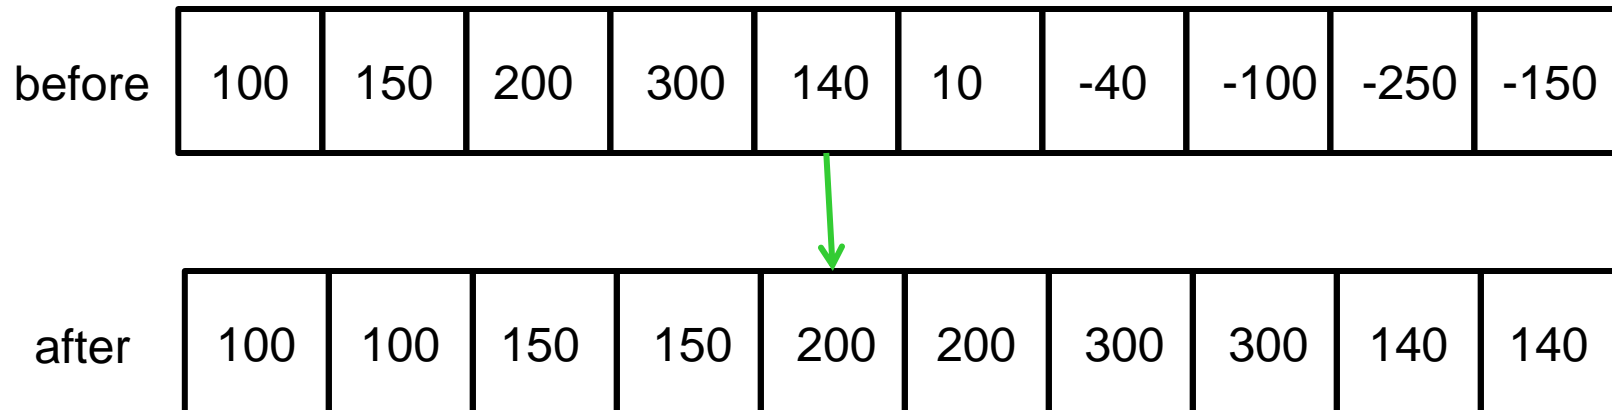

- 1) Think solo (2 min)
- 2) Discuss: (2 min)

# Start at the end!

```
public void lowerPitch()           // In the sound class
{
    SoundSample[] original = this.getSamples();

    for( _____ )

        original[index].setValue( original[index/2].getValue() );
}
```

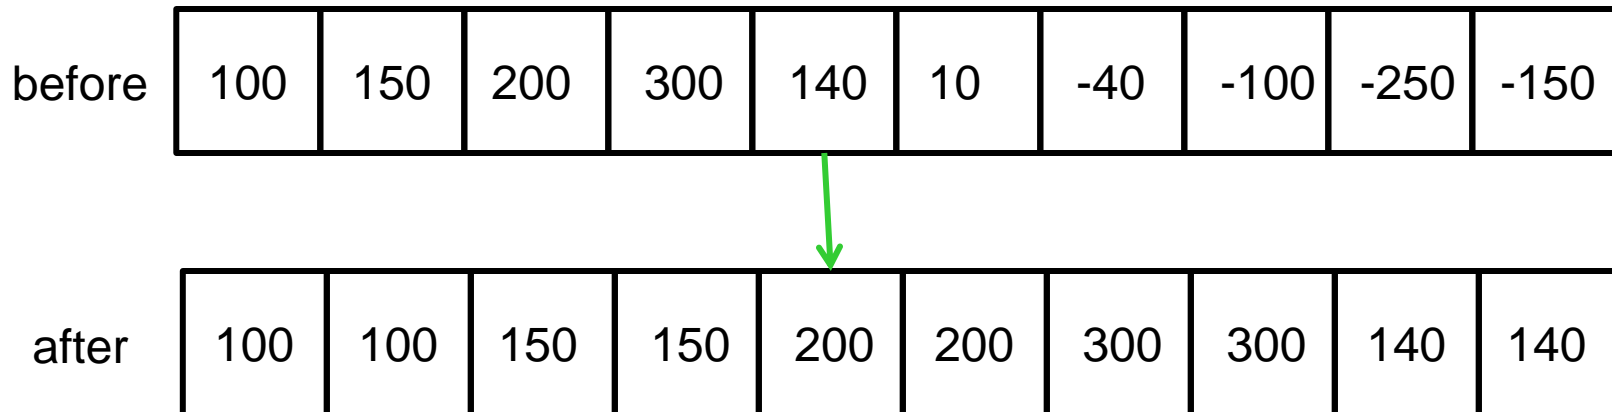

# Another name for this method...

```
public void stretchInPlace()           // In the sound class
{
    SoundSample[] original = this.getSamples();

    for ( int index = original.length-1; index >= 0; index-- )

        original[index].setValue( original[index/2].getValue() );
}
```

# ...that could apply to Pictures too!

Complete the code below to stretch the calling object Picture both horizontally and vertically

```
public void stretchInPlace() // In the Sound class
{
    SoundSample[] original = this.getSamples();

    for( int index = original.length-1 ; index >= 0 ; index-- )
        original[index].setValue( original[index/2].getValue() );
}
```

---

```
public void stretchInPlace() // In the Picture class
{
    for ( int x = )
        for ( int y = )
        {
            Pixel source = this.getPixel( );
            Pixel target = this.getPixel( );
            target.setColor( source.getColor() );
        }
}
```

# TODO

- Reading for next class: 10.1-10.4
- Finish PSA 7 by tonight (Bring headphones to lab!)
- Bring graded Exam #3 to class Wednesday for review
